## Chapter 1 BAL plugin

### 1.1 Prerequisites

The **BAL**'s installation requires have already installed created a wallet. If you are not electrum website, to the go to the download section and installation process as *from Python sources*'. You cannot use the AppImage version as it is necessary to copy the **BAL PLUGIN** into **Electrum's PLUGIN directory**.

Electrum web site - Download section

Linux folder structures and locations can vary based on the distribution (Debian, Ubuntu, Mint, among others). I used Debian 12.

### 1.2 Download BAL PLUGIN

Go to [HTTPS://BITCOIN-AFTER.LIFE](https://bitcoin-after.life)

## installation on Linux

as a prerequisite that you **ELECTRUM** and have in this situation, go to the **DOWNLOAD** section and follow the Electrum described in '*Installation*

## BAL plugin installation on Linux

Scroll down the page to the ‘Plugin Operations’ section

### Plugin Operations

The plugin generates a transaction with Locktime set to a future date; the transaction is signed and sent to one or several Will-Executors, who will take care in retaining the transaction and send it at the expiry date.

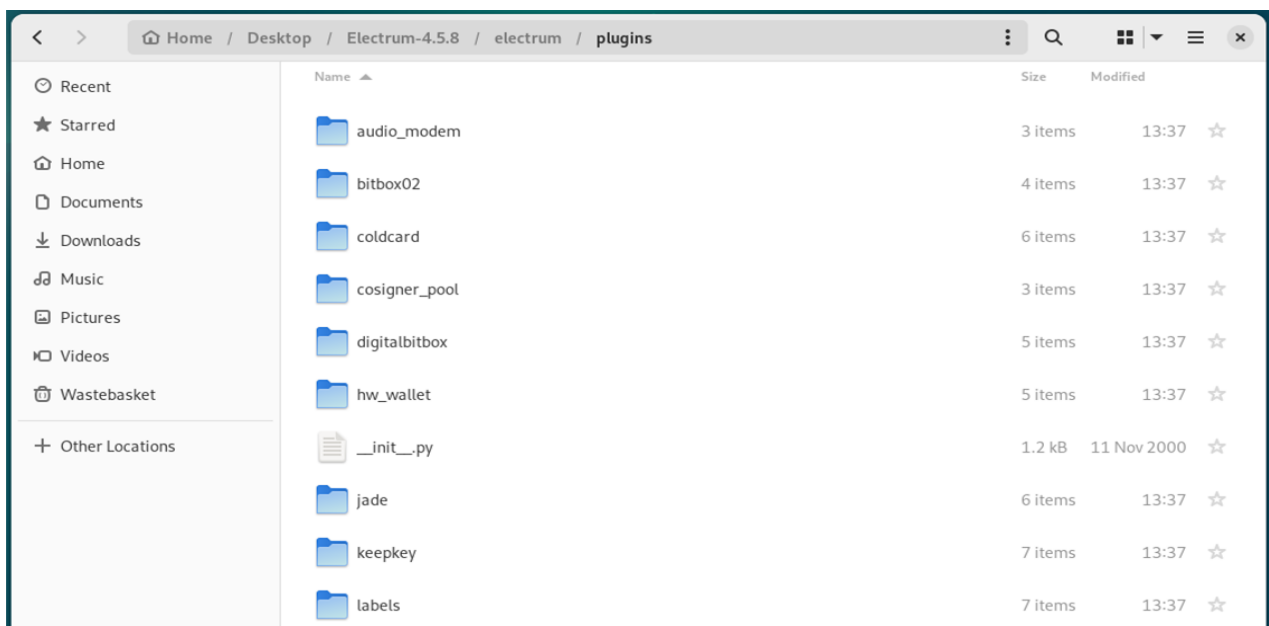

In order to provide economic incentives for the Will-Executor to keep and broadcast the transaction, an output will contain a fee payment, which will be received only when the heredity transaction is confirmed in the block chain.

[Bitcoin After Life Electrum Plugin](#)

Click on “Bitcoin After Life Electrum Plugin “ or this link Bal Plugin and Download the plugin

Verify the **Electrum** installation location and locate the **Plugins directory**. For instance, I located the directory at **/home/user/Desktop/Electrum-4.5.8/electrum/electrum/plugins/** as depicted in the picture.

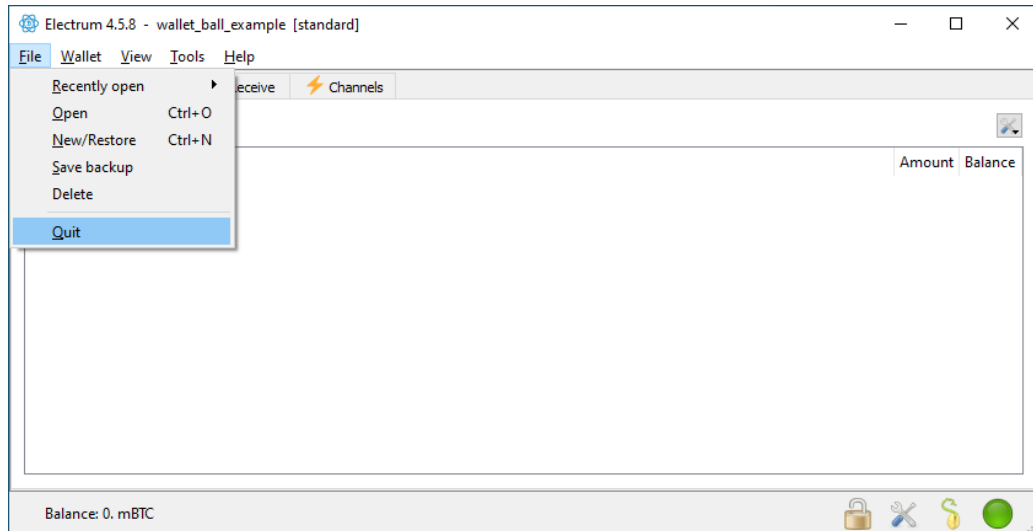

## BAL plugin installation on Linux

Install the plug-in following the on-screen instructions, making sure that the destination folder is the electrum plug-in folder, chosen when installing **ELECTRUM**

### 1.3 Installation procedure BAL PLUGIN

1) Close ELECTRUM, if it is open

2) Find  
**bal-**

the file

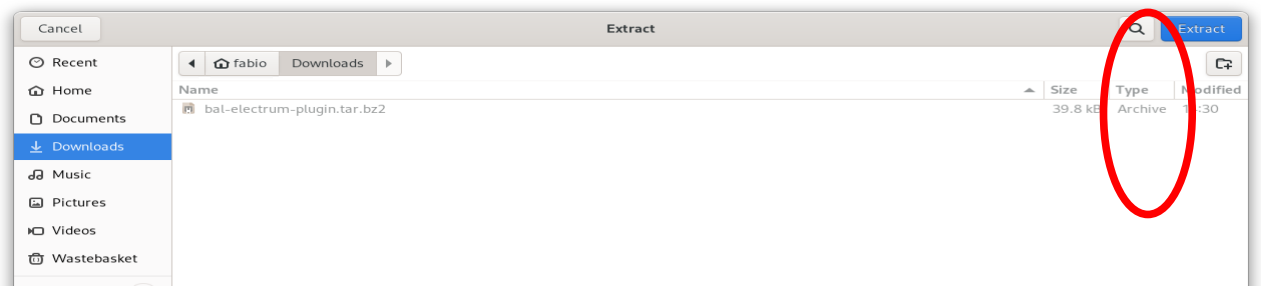

**electrum-plugin.tar.bz2**, normally found in the **DOWNLOAD** folder

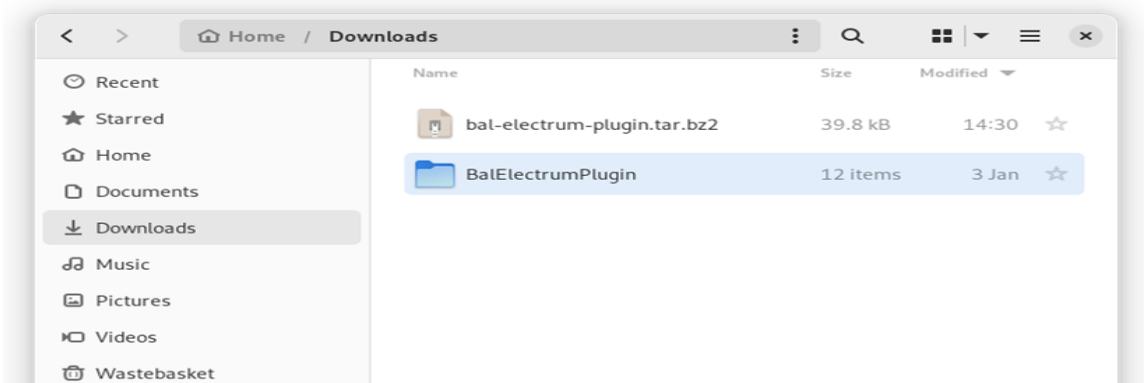

3) Choose any tool you like to unzip the **bz2** file.

BAL plugin installation on Linux

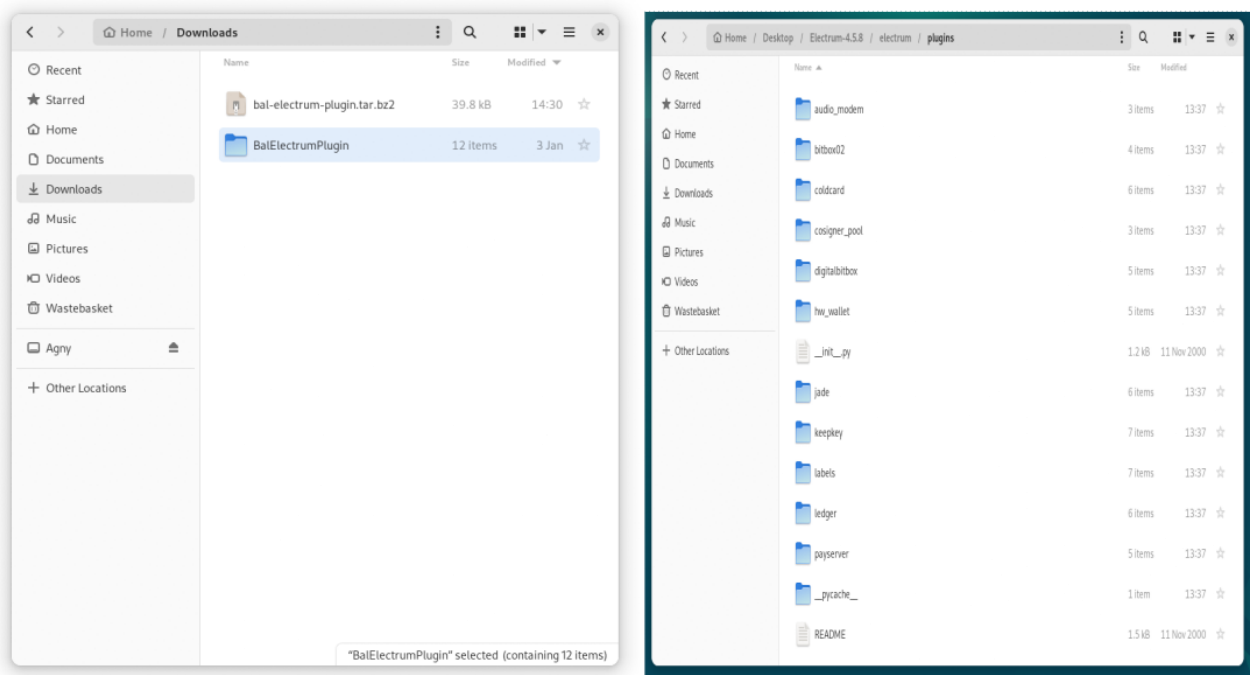

I

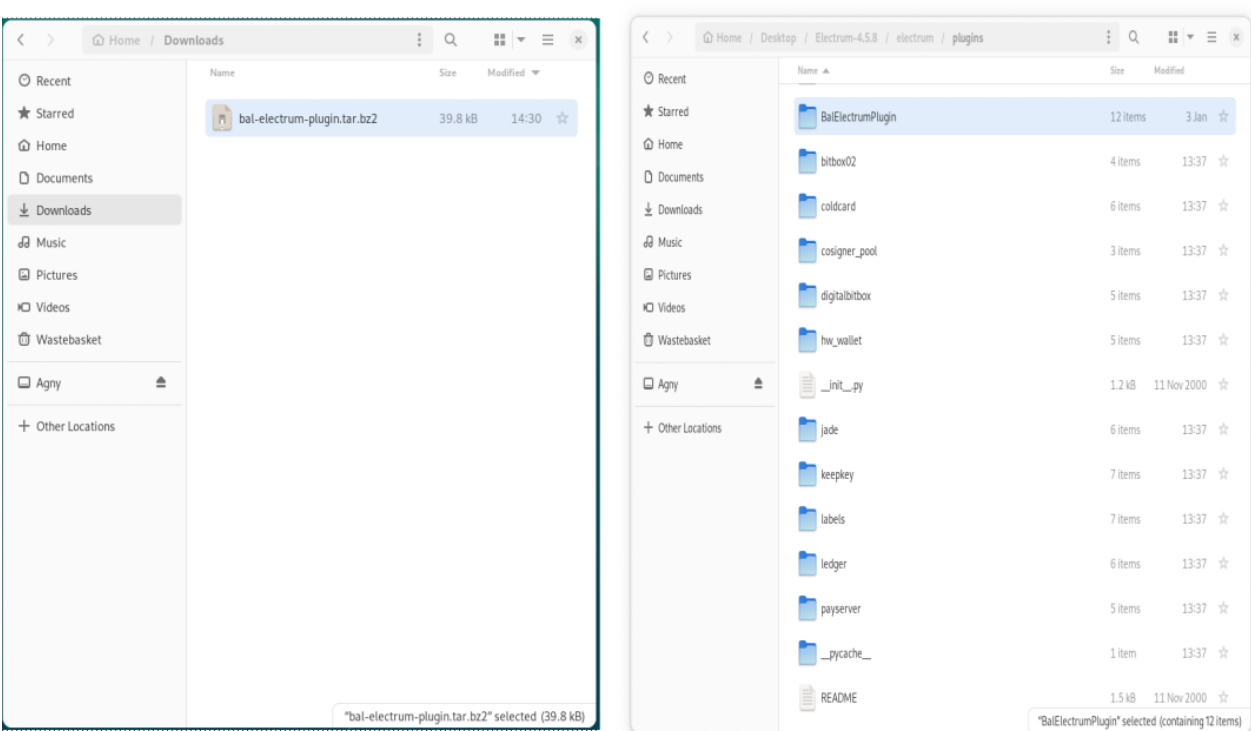

have used the default Debian software by graphical interface

BAL plugin installation on Linux

4)Snap the two windows

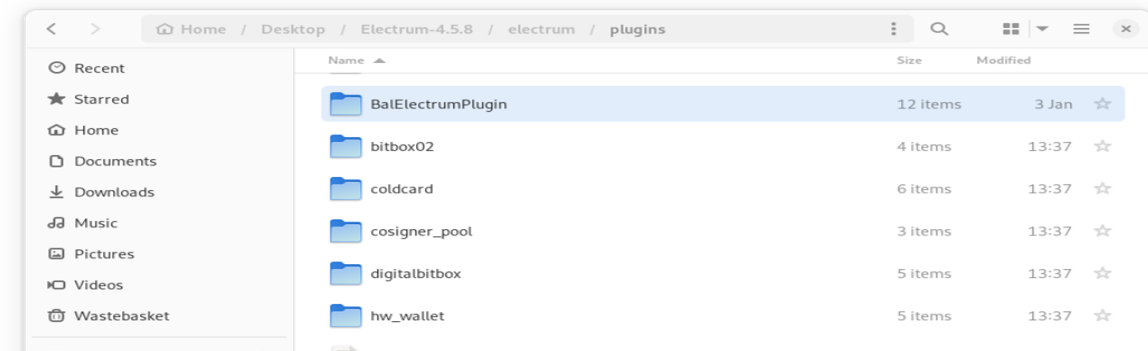

5) Drag or extract the contents of the compressed file into the **Electrum** plugin folder.

## BAL plugin installation on Linux

Should Linux ask you to grant permissions to access and copy the files to the target directory, Confirm and continue

6) The “**BalElectrumPlugin**” folder should now be in the *Electrum Plugins* folder.

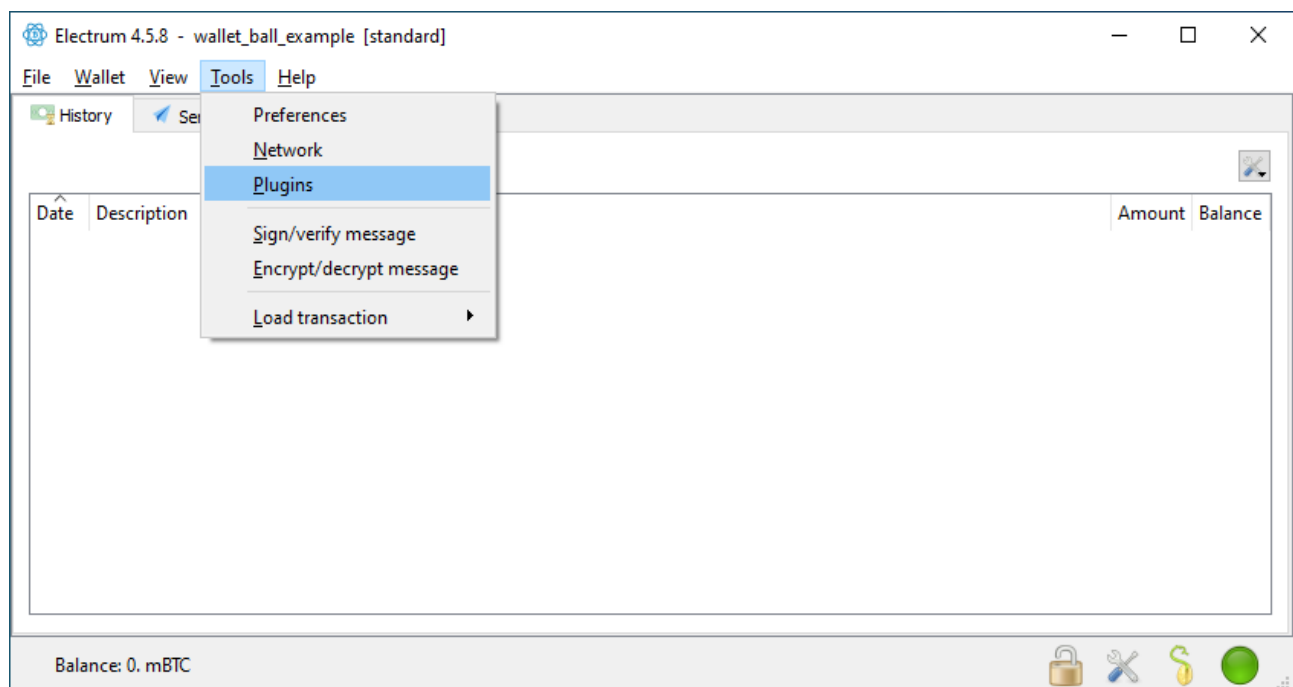

Close any open windows and proceed with the steps.

6) Open Electrum

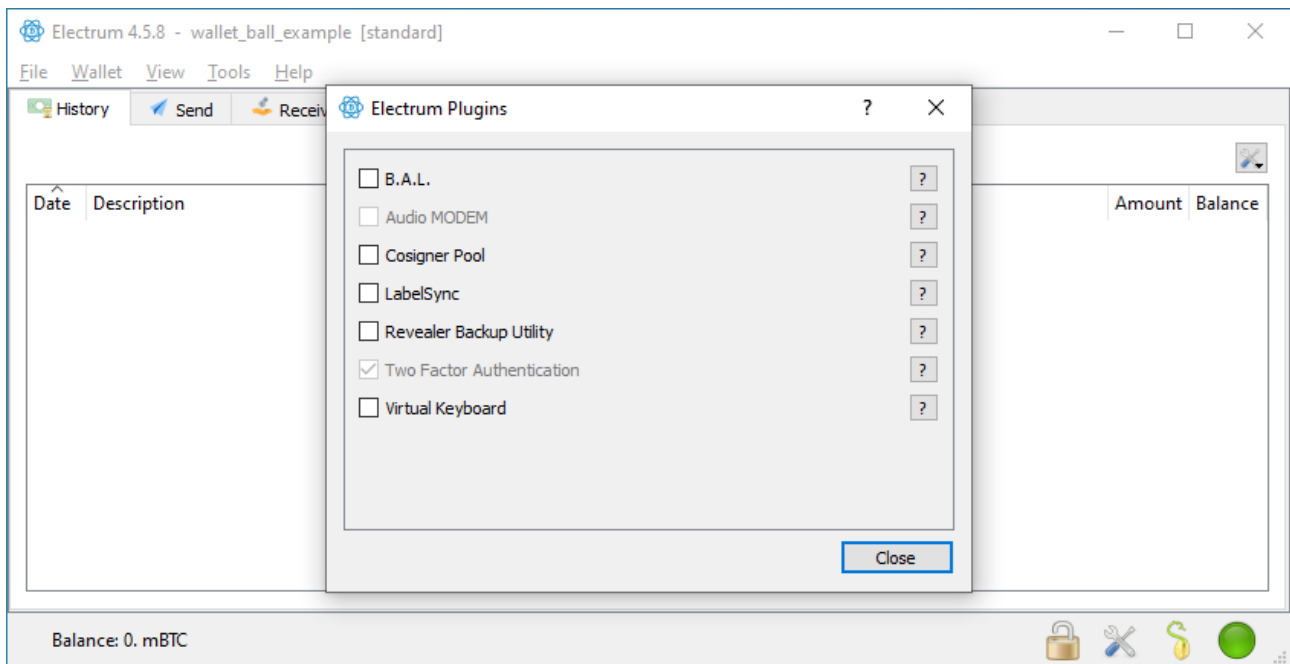

Launch **Electrum** using the correct procedure for your installed Linux distribution.

7) Click on Tools → Plugin

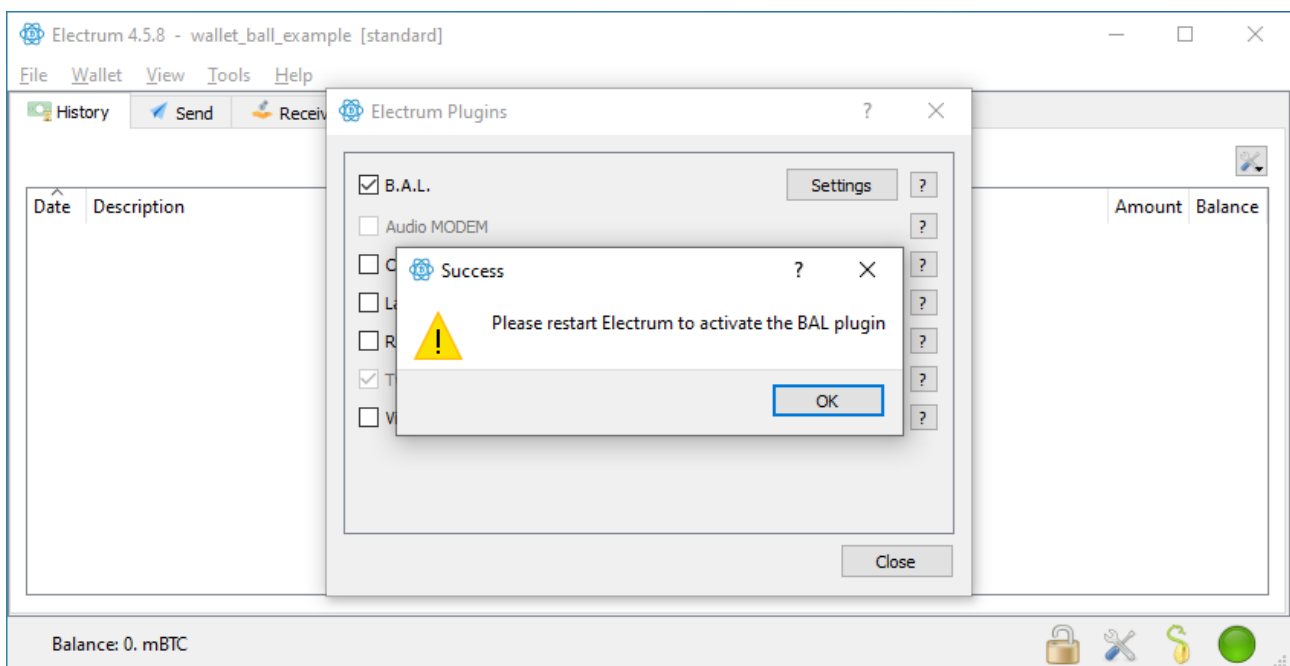

8) See activatable or active pluginsPlugin

## BAL plugin installation on Linux

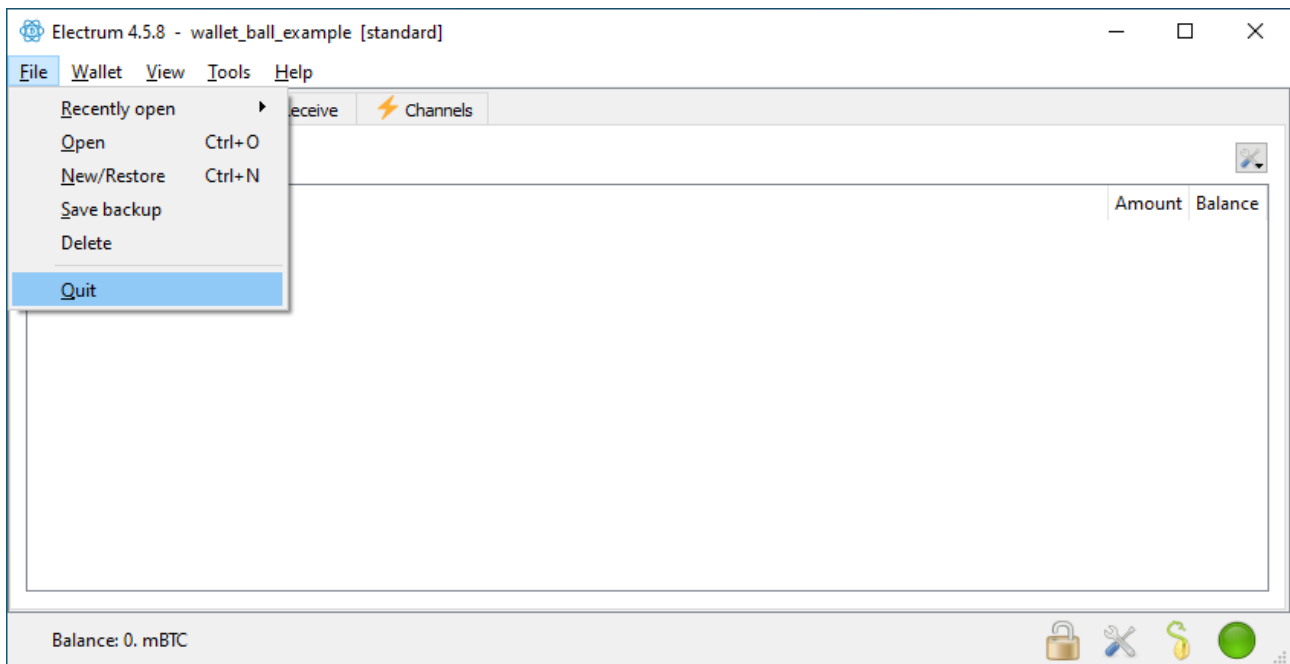

9) Click on the check box to the left of B.A.L. to activate it and click on **CLOSE**

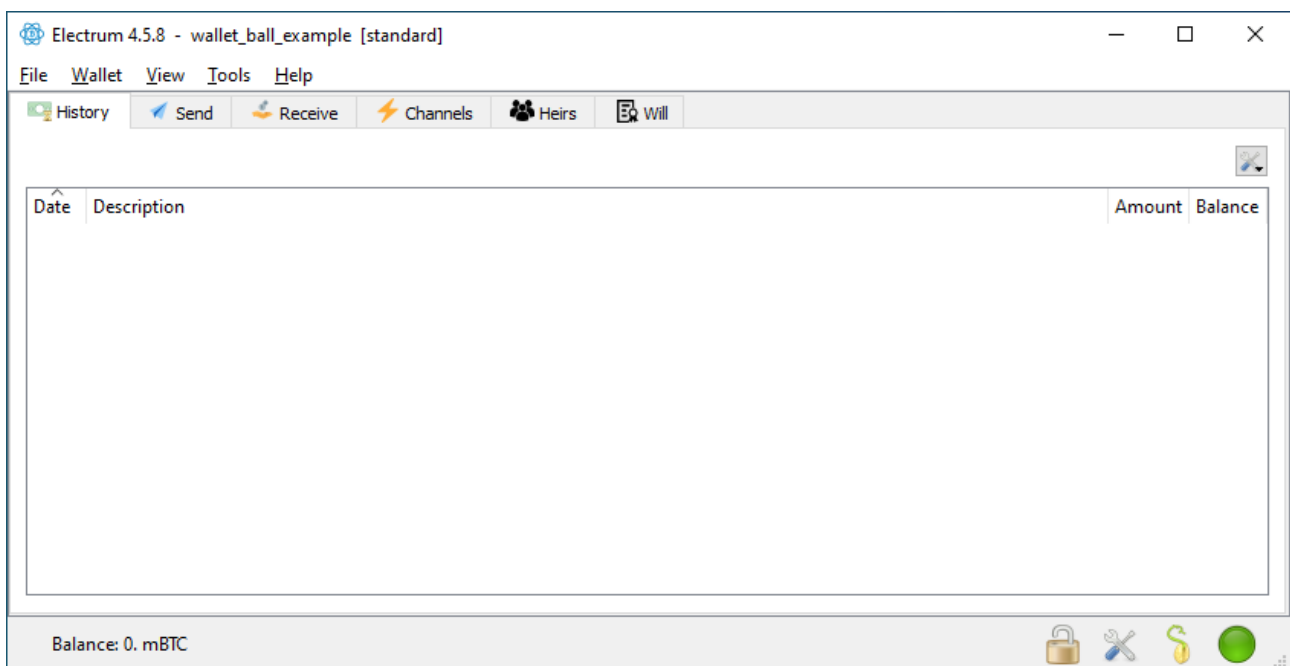

Press the 'OK' button and after the 'CLOSE' button

10) Once back at the main window **CLOSE ELECTRUM**

## BAL plugin installation on Linux

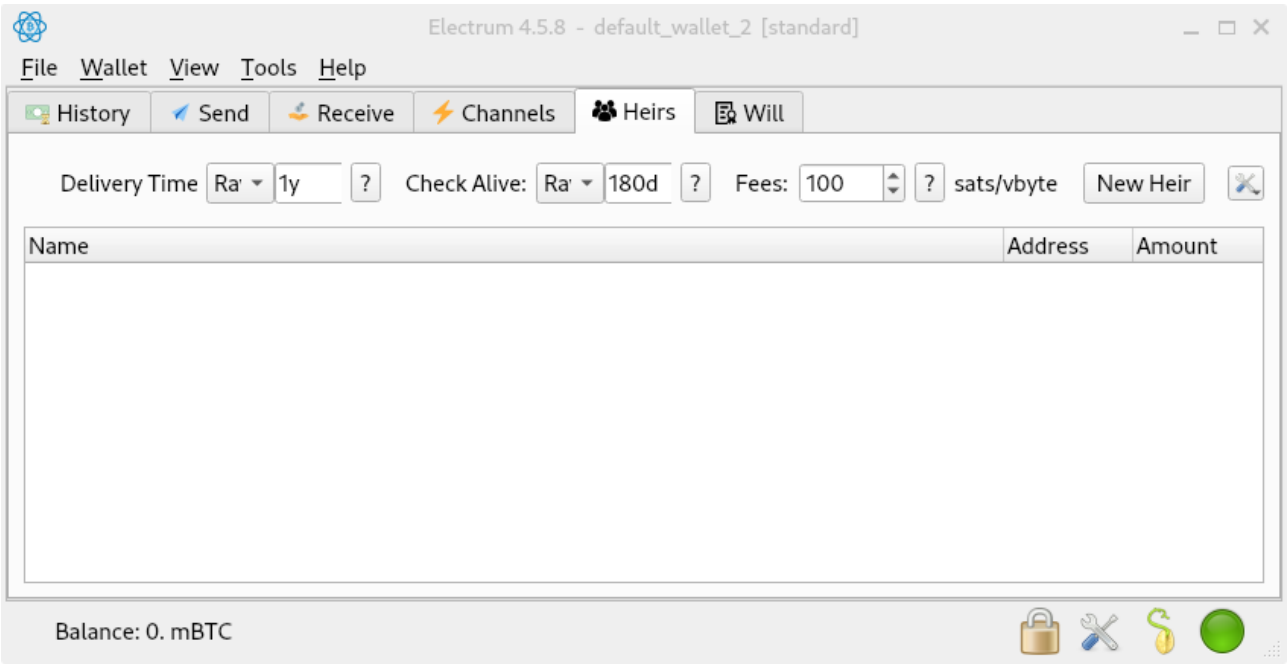

11) Reopen Electrum and appear in the programme **HEIRS** e **WILL**

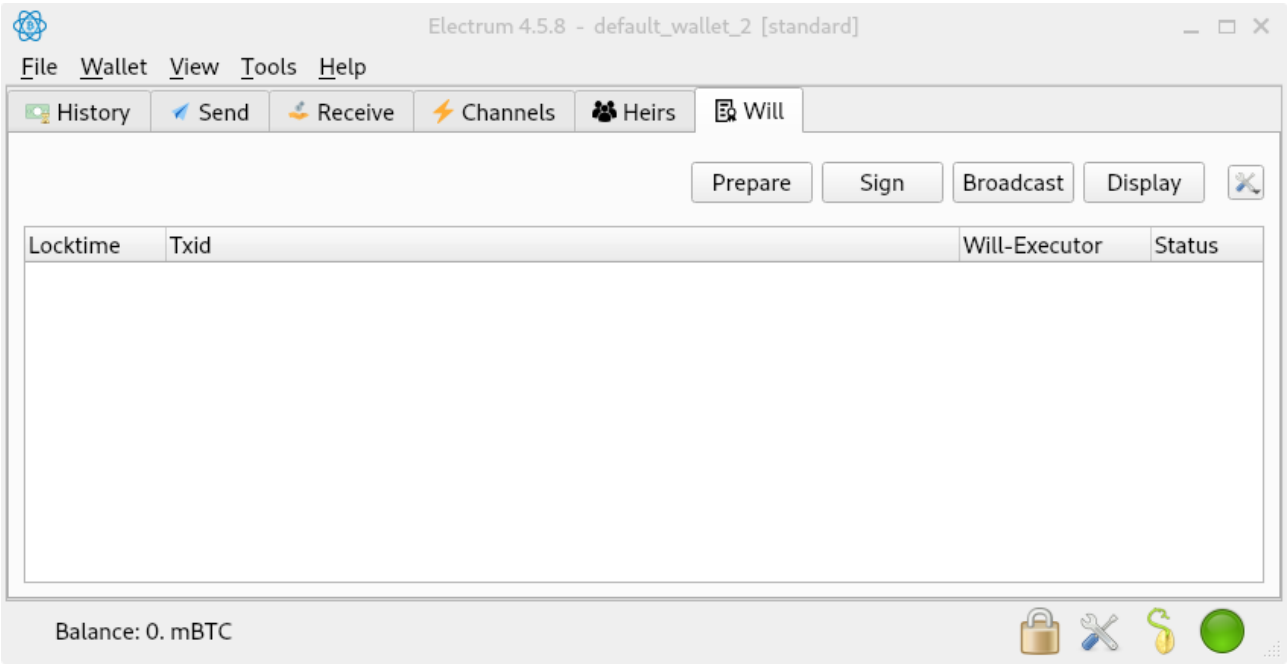

**Heirs page**

BAL plugin installation on Linux

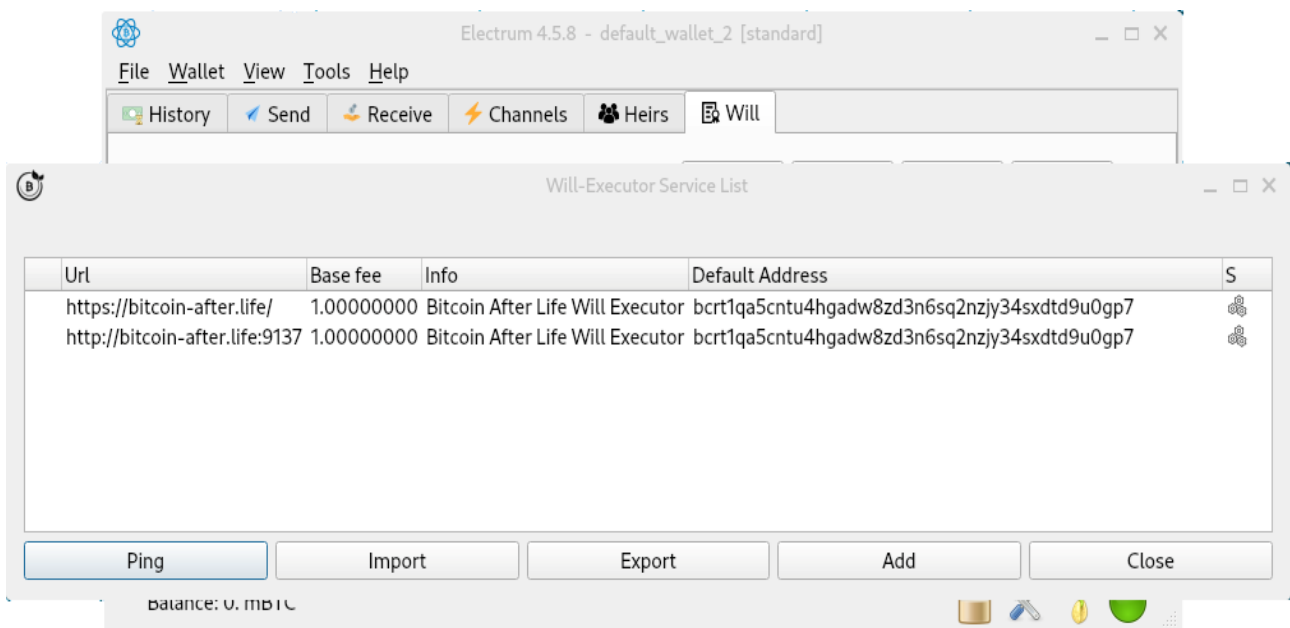

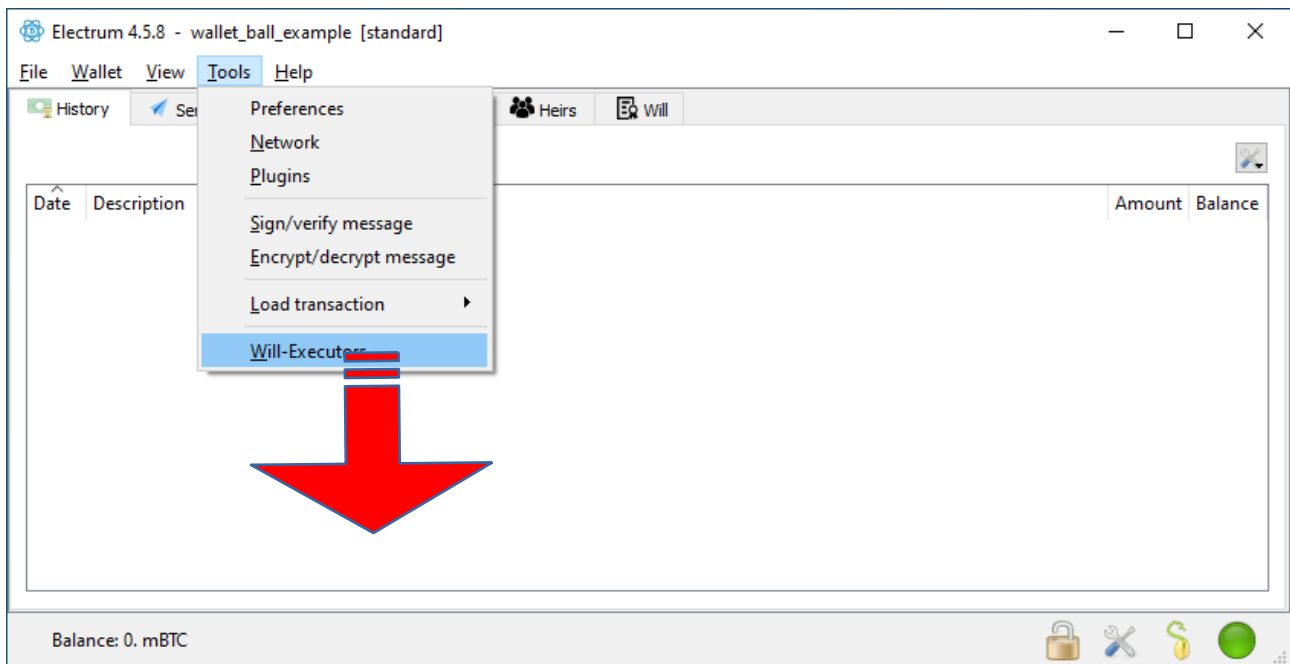

Will page

and in TOOLS → **WILL EXECUTORS**

## BAL plugin installation on Linux

**Refer to the manual for a detailed explanation of how the Plugin works.**
